

RME launches ADI-2 Pro FS R BE

Haimhausen January, 2020

At this year's Winter NAMM Show 2020 (January 16 to 19, 2020) in Anaheim, California, RME presents its new ADI-2 Pro FS R Black Edition, an updated version of the high-end AD/DA reference converter ADI-2 Pro FS in black color design. Featuring optimized specifications as well as comprehensive IR remote support the ADI-2 Pro FS R Black Edition is the perfect choice for audiophile Hi-Fi users who use the converter as a main interface for flawless music and movie sound reproduction.

The ADI-2 Pro FS R Black Edition is one of the most versatile converters on the market and integrates several devices in a single unit: a high-end AD/DA converter with SteadyClock FS Femto-Clock in professional studio quality, a dual headphone amplifier, a multi-format converter (AES, SPDIF, ADAT) with monitoring capability, a DSD recording and playback converter as well as an AD/DA frontend for audio measurements, mastering and hi-fi applications with up to 768 kHz sampling frequency.

Newly improved performance values

The ADI-2 Pro FS R Black Edition features the AK4493, the DAC chip of the RME ADI-2 DAC, which significantly reduces the THD and increases the signal-to-noise ratio by 3 dB during digital-to-analog conversion. RME's unrivaled circuit design also provides 2.5 dB of analog headroom as well as digital headroom up to +4 dBFS, ensuring that even high intersample peaks don't cause audible distortion.

Convenient remote control

Just like the ADI-2 DAC, the ADI-2 Pro FS R Black Edition offers comprehensive IR remote control. It includes RME's new Multi-Remote-Control, which perfectly matches the functionality of both DAC and Pro. In addition to dedicated buttons for standby, volume, mute, balance, bass/treble, input selection and more, it features seven assignable buttons for flexible access to 52 different features and commands. Optionally remote controls like the Logitech Harmony series or specific programmable IR transceivers can also be used.
